

Update 28 April 2026

1. Consolidated Administrative Hierarchy & Revenue Flow

Clox utilizes a tiered revenue distribution triggered automatically upon job completion, based on the **Origin City** of the load.

Position Name	Level	Revenue Share	Payout Cycle	Core Global Responsibility
Super Admin (HQ)	Global	15%	Continuous	Platform governance, global pricing standards, and technical support infrastructure, and global 3rd-party API costs.
State Master Admin	Regional	10%	4th Night	Regional compliance audit, legislative adherence oversight, and sub-admin support.
Local BDE Admin	Local	5%	4th Night	Sales, local carrier/sender onboarding, and relationship management.

Net Admin Settlement Logic: Before the fortnightly (4th night) transfer via **Monoova**, the system applies an automated deduction for **Management Fees** and **Marketing Costs** from the administrative gross share.

$$Net_Payout = (Gross_Admin_Share) - (Management_Fees) - (Marketing_Costs)$$

Update 28 April 2026

2. Consolidated User App Workflows

A. Sender (Customer) Workflow: The RFP & Routing Process

1. **Onboarding:** Register via OTP. Verify **Business (KYB)** or **Individual (KYC)** status via **easyAML**.
2. **Request Creation:** Input locations via **Google Maps**. Select "Per KM" or "Hourly" (4-hour minimum).
 - **Multi-Pickup (Hourly Only):** Senders can add up to **four (4) pickup locations** for a single local job.
 - **Auto-Route Logic:** The system sequences these stops based on proximity and validates the total estimated time against **NHVR driver fatigue rules** (e.g., 15-min break required within 5.5 hours).
3. **Site Access & Maneuverability Assessment: Mandatory Input.** Senders must specify site conditions using professional logistics terminology to avoid "Futile" charges:
 - **Maneuverability:** Turning circle radius (e.g., tight street vs. wide yard), dock height (48" standard), or overhead clearance requirements.
 - **Site Features:** Forklift on-site, tailgate required, or time-critical window.
4. **Proposal Review:** View multiple carrier bids. Review **Driver Rating, Vehicle Registration/RWC, and Transit Insurances**.
5. **Payment:** Pay **100% Upfront** via **Stripe Connect**.

B. Transportation Company Workflow: Basic vs. Fleet Management

Based on a deep analysis of previous iterations, the carrier experience is split into two modes:

Basic Mode (Free Marketplace Access)

- **Compliance Gate:** Access is locked until ABN, Insurances, and vehicle RWCs are verified.
- **Job Board:** View broadcasts matching fleet capacity. Bidding UI displays only the **Net Payout (70%)**.
- **Asset Allocation:** Carriers **must** allocate a specific verified vehicle and driver to submit an RFP.
- **Wait Time Monitoring:** Basic notifications for pickup/destination arrival timestamps.

Update 28 April 2026

Fleet Management Mode (Fleet+ SaaS Subscription)

A. Subscription & Setup

1. Compliance Gate: Mandatory upload of ABN, Public Liability (\$10M-\$20M), Transit Insurance, and RWCs.
2. Fleet+ Tiers: Companies select from Free Trial (14 days), Starter, Growth, or Enterprise.
3. Vehicle Profiles: Each vehicle is registered with fuel type, service schedule, and a custom Cost Profile (\$/km or \$/hr).

B. Smart Dispatching & Analytics

1. Job Board Visibility: System auto-filters jobs based on vehicle class and specialized permits (e.g., DG).
2. Smart Allocation: System suggests the Closest, Most Profitable, or Least Idle vehicle for any accepted RFP.
3. Profit Dashboard: Real-time visibility into fleet utilization % and revenue per truck.
3. Technical Specification: "Profit per Vehicle" Engine

This engine calculates the financial performance of each individual asset in the fleet.

Acceptance Criteria for Developers:

AC 1: Data Aggregation: The system shall aggregate data from four sources: Completed Job Fares (70% Net), Fuel Log Entries (Manual/API), Driver Payroll Data (Shift time vs. Grade rate), and Variable Costs (Tolls/Maintenance).

AC 2: Profit Calculation Formula: The system must calculate trip-level profit using:

AC 3: Depreciation Allocation: For the "Enterprise" tier, the system shall subtract a daily Asset Depreciation value based on the vehicle's initial purchase price and target residual value.

AC 4: Utilization Thresholds: The dashboard shall flag any vehicle with a Profit Margin < 15% or Idle Time > 40% for management review.

AC 5: Maintenance Watchdog: The system shall auto-status a vehicle to MAINTENANCE and block it from job bidding if the odometer exceeds the set service interval or the RWC expires

Update 28 April 2026

C. Driver Workflow: The Safety Sequence

1. **Gate A (Pre-Trip):** Mandatory NHVR Safety Checklist (Tyres, Brakes, Lights, Fluids).
2. **Maneuverability Preview:** Driver receives the **Site Access Assessment** (Turning circle/Dock height) provided by the sender before arrival.
3. **Arrival Sequence:** Radar.com triggers arrival; 30-min free waiting timer begins.
4. **Gate B (Mass Check):** Driver verifies load weight and restraint. **Submit.**
 - **Report Discrepancy:** Taps button if weight > declaration to trigger a Stripe surcharge.
5. **Transit Lock:** "Start Trip" button enables **ONLY** after Mass Check. Tracking goes live to Sender.
6. **Fatigue:** Driver manages rest breaks via **Manual Logbook** (No in-app fatigue alerts in this version).
7. **POD:** Capture **Sign-on-Glass (SOG)** and cargo photos (server-locked timestamps).

3. Technical API Architecture: Fleet Registration (Upgraded)

This schema supports the "Basic" registration for all users while providing fields for the "Fleet+" profit analytics.

Endpoint: POST /v1/fleet/register

Field Name	Type	Description	Plan Tier
registration_number	String	Vehicle License Plate (Rego).	Basic
vehicle_class	Enum	Van, 3T, Rigid, Semi, etc.	Basic
gvm_gcm_kg	Integer	Gross Vehicle/Combination Mass for Mass Lockout.	Basic
rcw_expiry_date	Date	Roadworthy Certificate expiry for Maintenance Watchdog.	Basic
cost_per_km_fixed	Decimal	Fixed operational cost for profit analytics.	Fleet+
service_interval_km	Integer	Distance-based maintenance alert trigger.	Fleet+
fuel_type	Enum	Diesel, Electric, Petrol, Hydrogen.	Fleet+

Update 28 April 2026

4. Technical Infrastructure & 3rd Party Costs (AUD)

Provider	Service Function	Estimated Cost (AUD)
Stripe Connect	100% Upfront Holds & SaaS Billing	\$2.00/acc/mo + 2.9% + 30c/tx
easyAML / Trulioo	KYB (ABN) & KYC (Passport/License)	\$1.00 – \$3.00 per check
Radar.com	Polygon Geofencing & ETA Alerts	Pro starts ~\$600/mo (up to 10k users)
Twilio Proxy	Participant Number Masking	~\$1.15/mo per number + usage
Monoova	Real-Time Admin/Carrier NPP Payouts	\$0.50 – \$1.50 per payout
Google Maps	Routing & Global Address Validation	Usage-based

5. Critical Global Business Rules

1. **Labor Standards:** Enforce a **4-hour minimum payment** for local jobs.
2. **Chargeable Weight:** higher of dead weight or cubic weight (Road_Divisor = 4,000).
3. **Mass Lockout:** System must disable "Start Trip" if (Vehicle Tare + Payload > GVM).
4. **Transfer Reversal:** Breakdown release triggers a **Stripe Transfer Reversal** to re-fund the new carrier.
